

I CLAIM:

1. An improved structure of a suspension fabric cabinet including a cabinet made of fabric material; multiple locking strips provided by pair on the inner edges of the cabinet; each locking strip being
5 provided with a lip and a catch; and multiple shelves, each shelf being disposed of on both sides multiple L-shaped notches, and an extension each on the front and the rear edges; the extension being folded upward and folded in to overlap on the shelf to form a reinforcement rib; each shelf being secured in place between two
10 locking strips with notches on the shelf engaged to catches from the locking strips; multiple cells for storage of objects being formed vertically on the cabinet 3.
2. An improved structure of a suspension fabric cabinet as claimed in Claim 1, wherein, after the cutting of the notches on both sides of the
15 shelf, an extension is each provided on the front and the rear edges of the shelf, each extension being folded upward and folded in to overlap on the shelf, the overlapped extension being sewn to the shelf to form each a reinforcement rib.
3. An improved structure of a suspension fabric cabinet as claimed in
20 Claim 1, wherein, each locking strip is secured in place with its lip

sewn to the inner edge of the cabinet.
